We've got the power.

With plusserver, your IT modernization project benefits ...

... from combination of
superpowers that is unique in Germany.

Why plusserver?

The combination of our superpowers is unique in the German market.

1st Enterprise Open Source Cloud in Germany

plusserver developed the first German Enterprise Open Source Cloud based on the Sovereign Cloud Stack and Gaia-X.

4 pluscloud data centers in Germany

Our cloud data centers in Germany are awarded with the highest levels of testation and certification (e.g. pluscloud open & pluscloud VMware BSI C5 Type II).

24/7 Support DNA

We are enterprise-proven and have our support organization and product development based in Germany.

Multi-Cloud ready

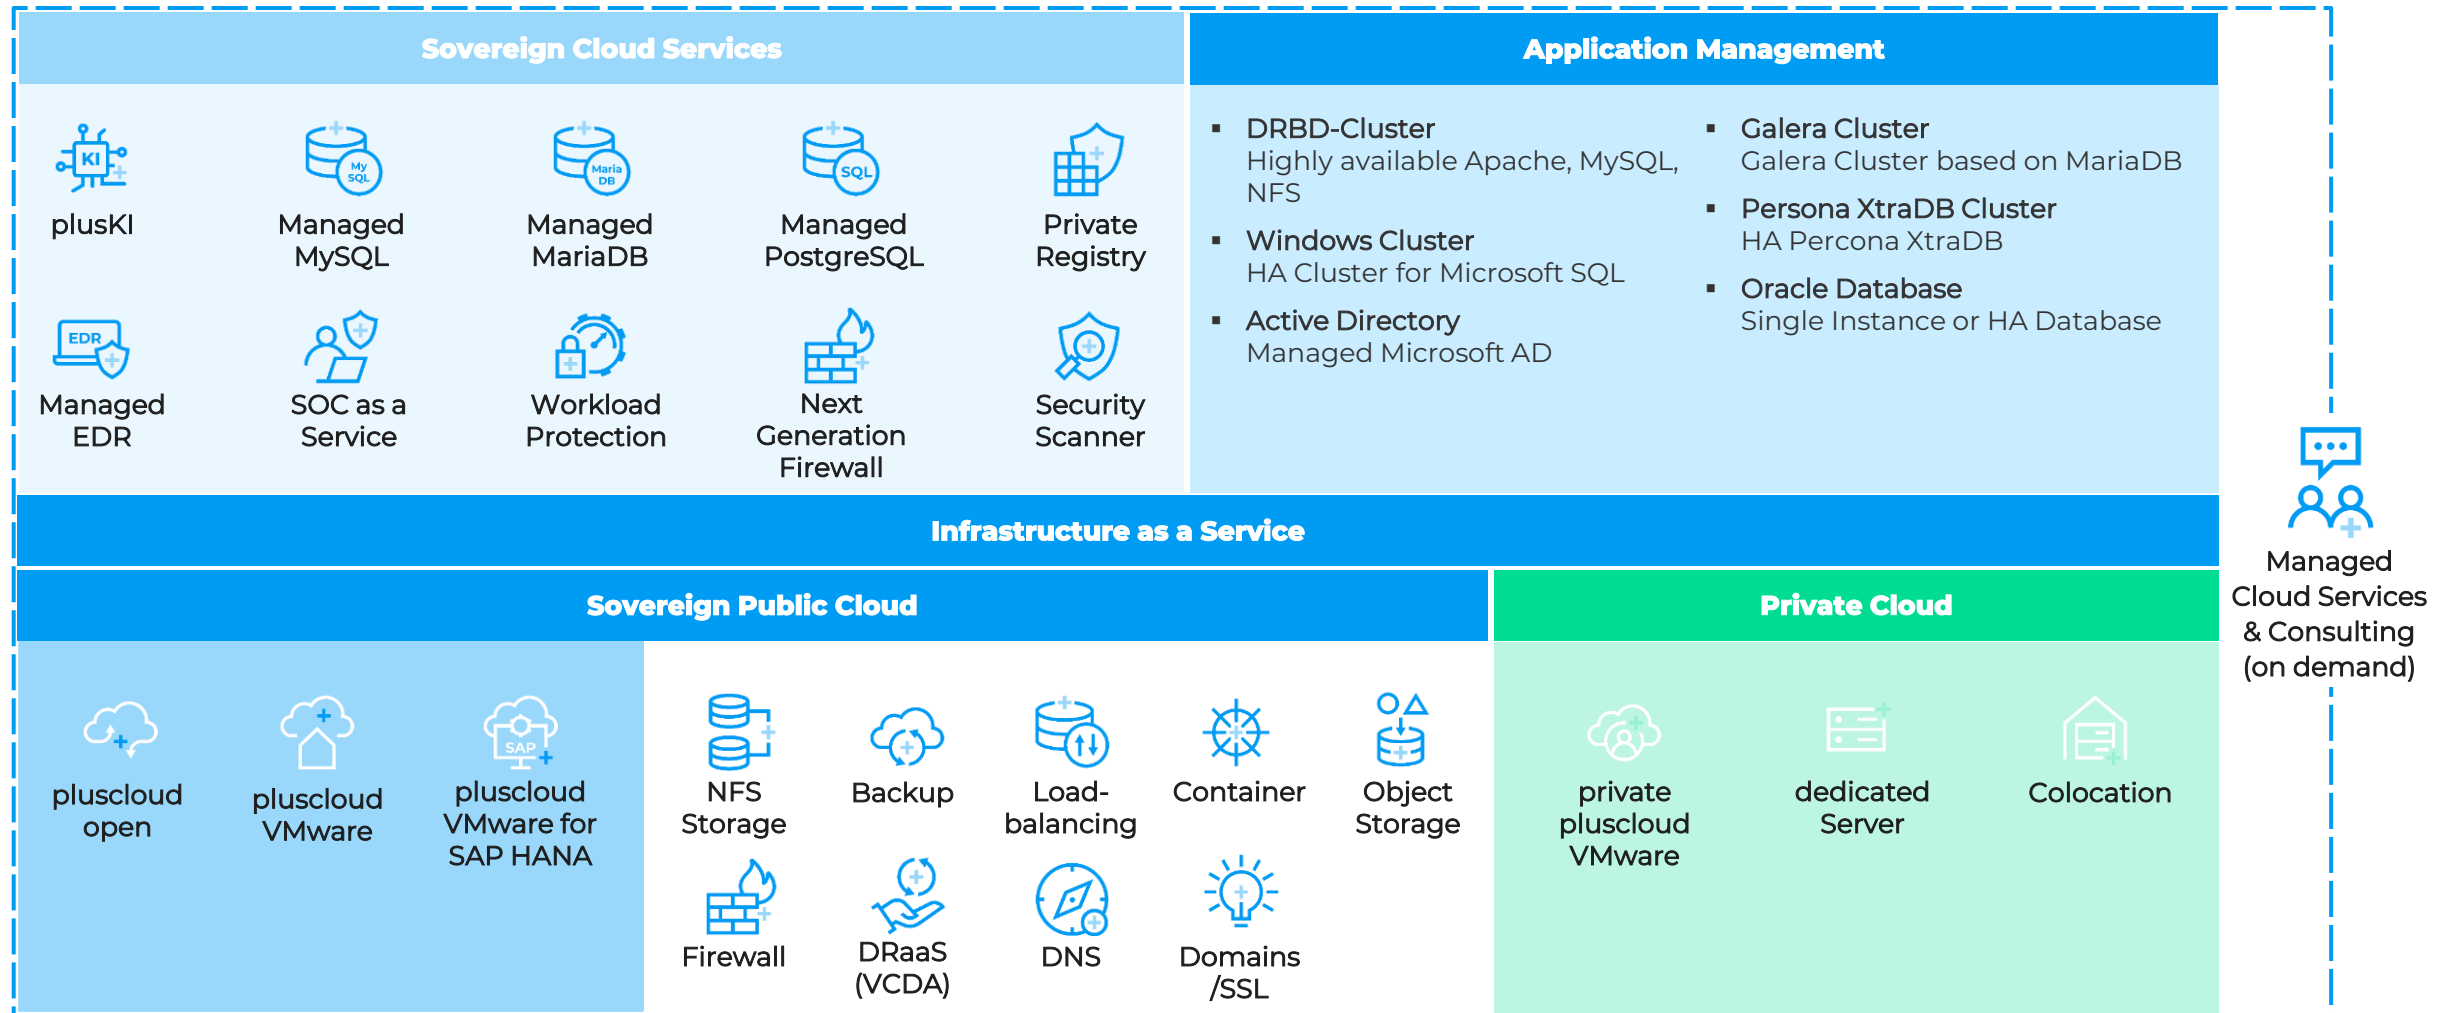

Our cloud platforms based on Open Source (SCS) or VMware can be seamlessly integrated into a multi-cloud environment. This integration is done without vendor lock-in and without transfer costs.

IT modernization at the pace of the customer

With our expertise ranging from cloud-native to legacy architectures, we provide comprehensive consulting to public administrations and companies. We meet them at the starting point of their IT modernization journey and guide them throughout the process.

IT transformation starts with IT modernization.

3 essential steps to succeed

Step I: Assess
existing IT Infrastructure

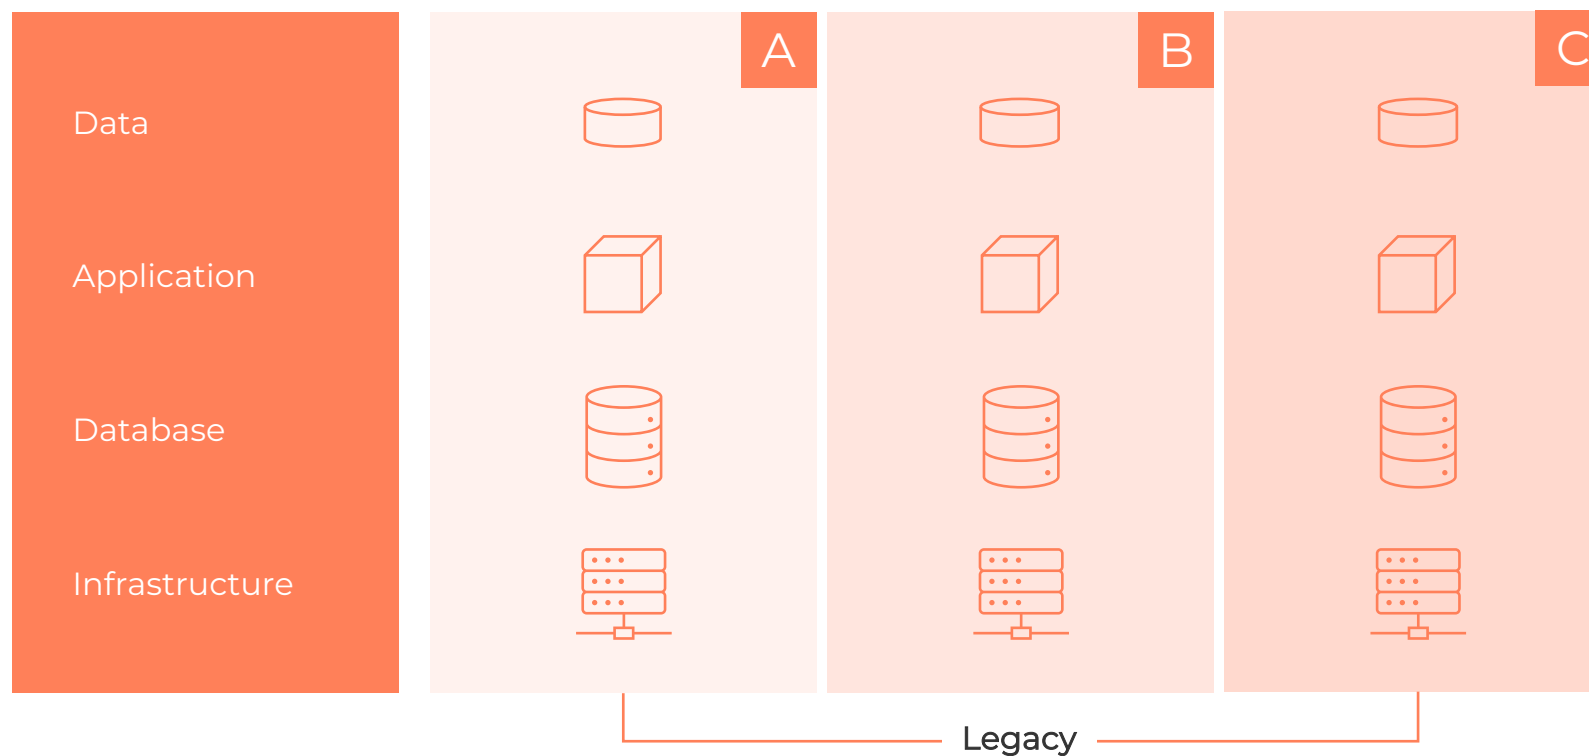

Step II: Modernize
IT landscape

Step III: Transform business
applications and models

Step I: Assess existing IT infrastructure

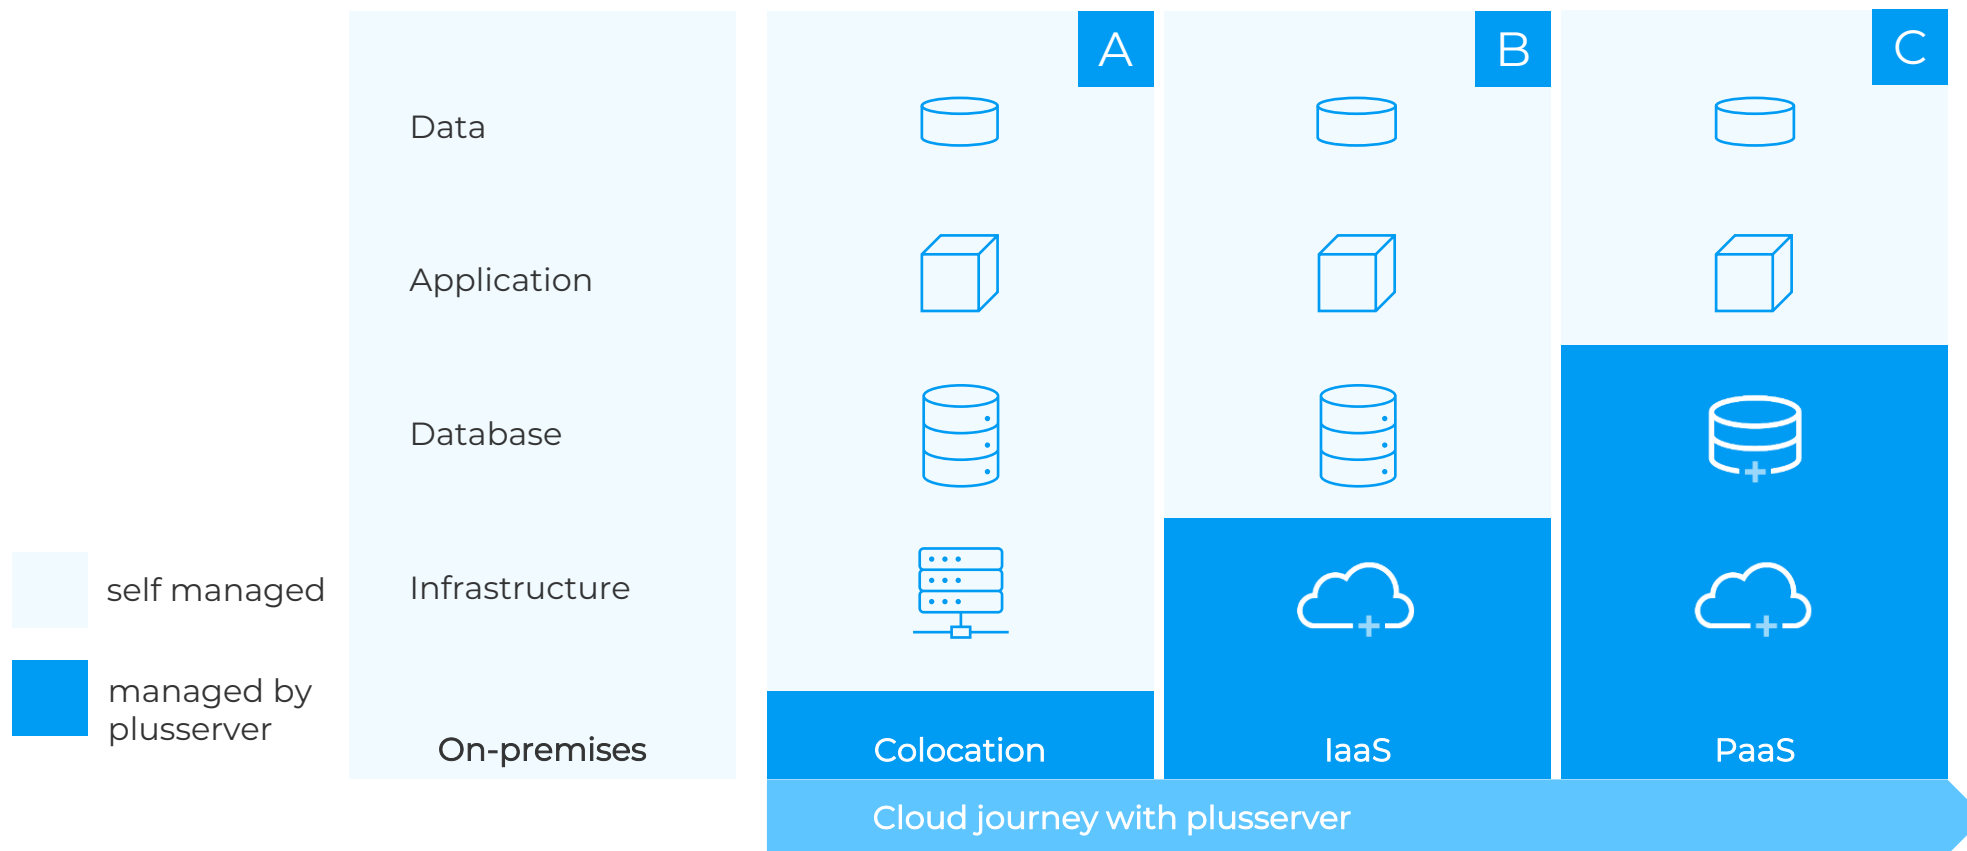

Which systems can be migrated to a new IT?

Applications are no longer sustainable on the basis
On-premises infrastructure no longer sustainable

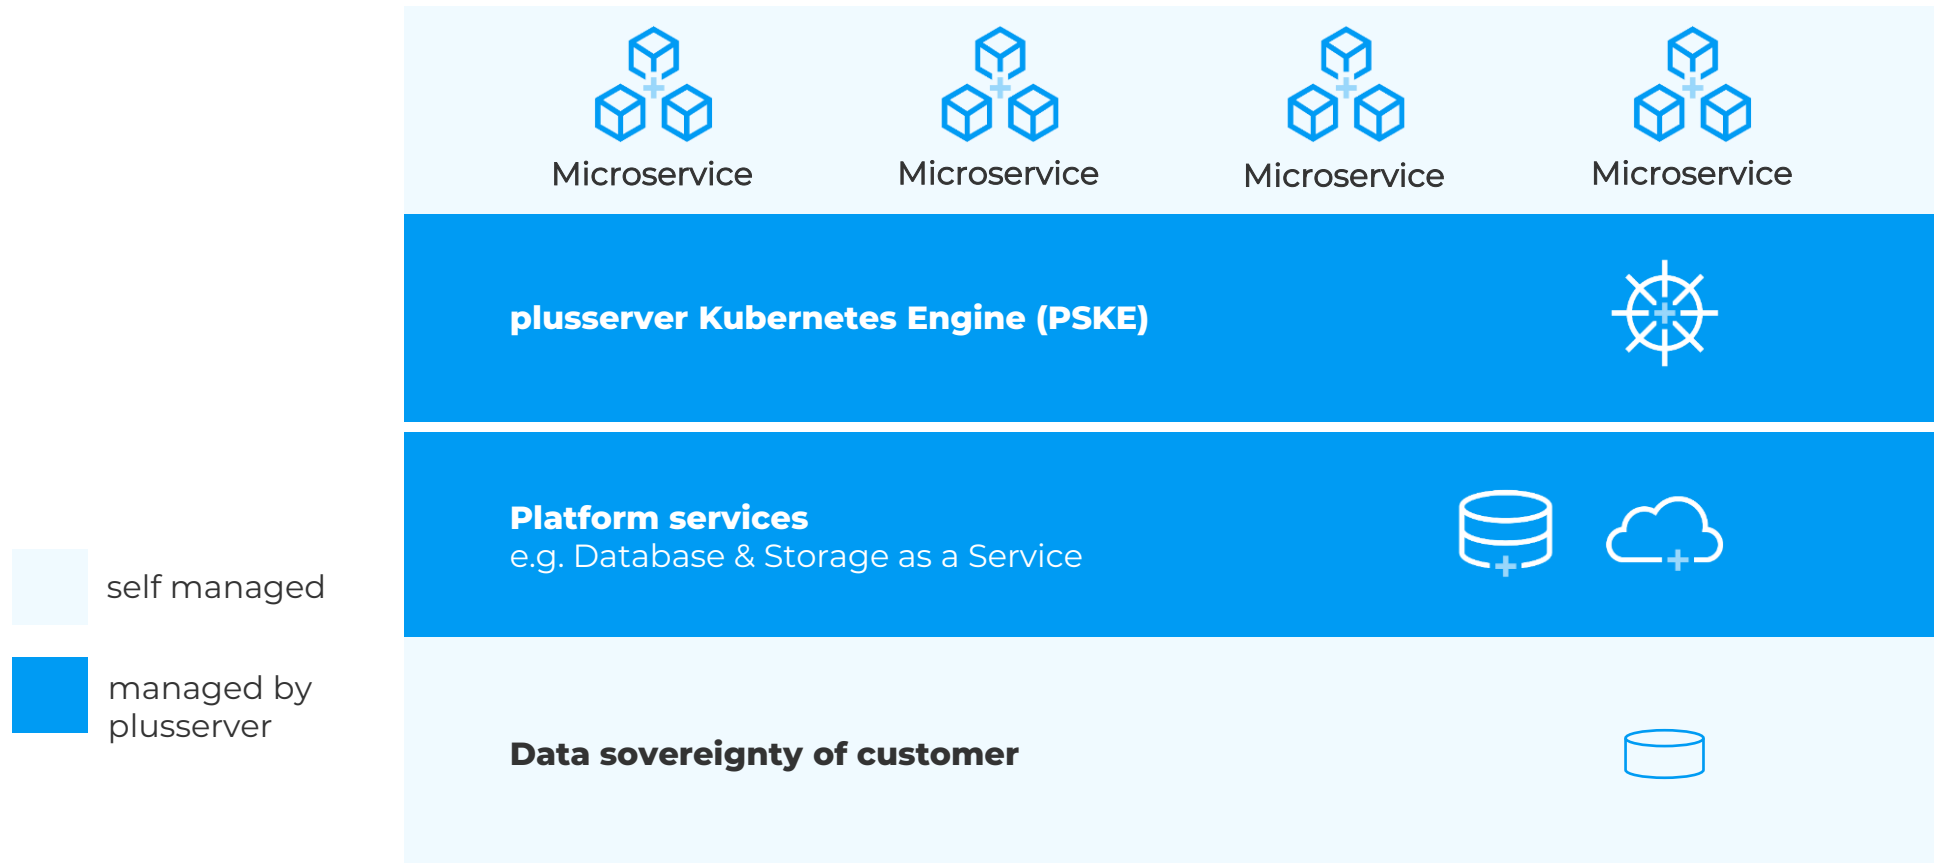

Step II: Modernization of IT landscape

How plusserver specifically supports your project

Step III: Transformation of business models

... and development of cloud-native business applications

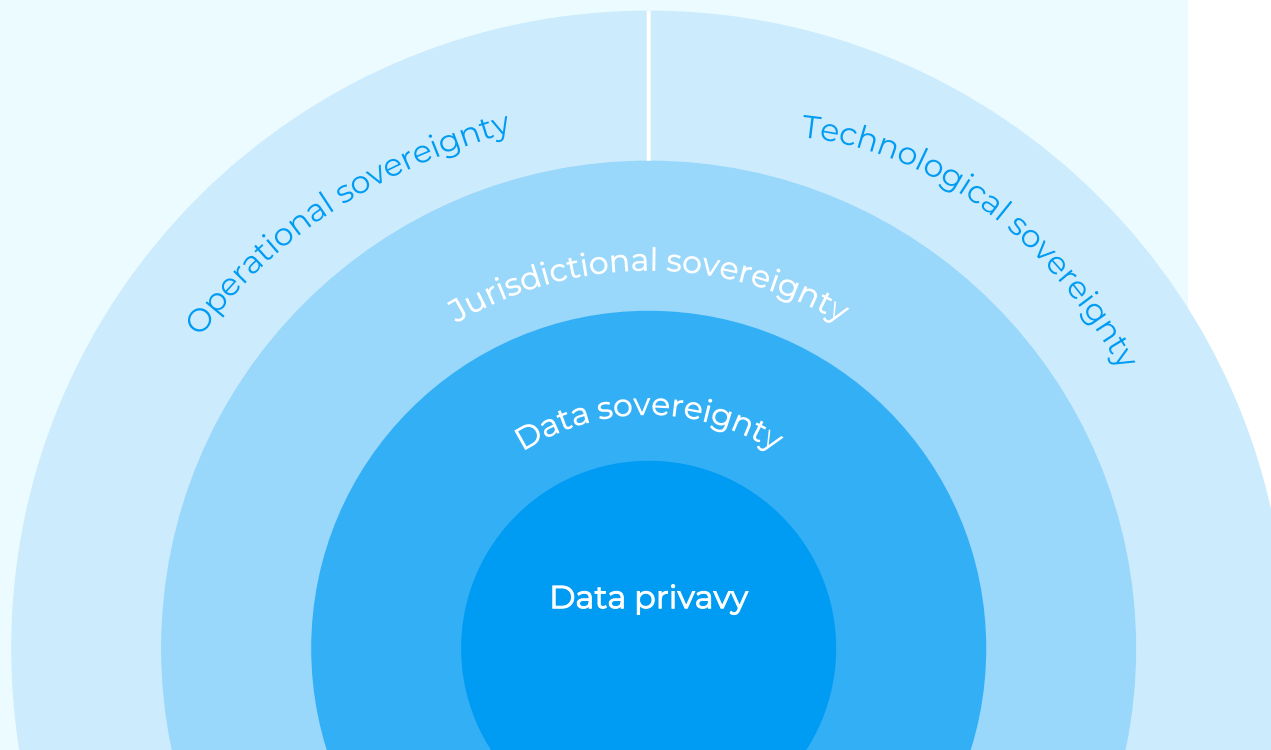

Digital Sovereignty

with plusserver

What is digital sovereignty?

The individual facets of digital sovereignty in the following combination result in a logical overall picture:

- + **Technological Sovereignty:** is based on open source or generally available standardized technology and enables transparency and traceability of data processing and the software components used.
- + **Operational Sovereignty:** Transparent control of operations, from provisioning and management of solutions and services to monitoring physical and digital access to infrastructure.
- + **Jurisdictional Sovereignty:** describes the operation in a self-chosen legal area without the right to pass through from third legal areas.
- + **Data Sovereignty:** ensures complete power of disposal or self-determined control in the collection, storage, use and processing of own data.
- + **Data Privacy:** describes the protection against the improper processing of personal data and the right to informational self-determination.
